## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 41-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Youn (7,113,646) in view of Eifrig et al et al (5,974,184) for the same reasons as set forth in Section 3 of the previous office action, dated 12/16/09.

### ***Response to Arguments***

4. Applicant's arguments filed 7/8/10 have been fully considered but they are not persuasive. Applicant asserts on pages 10-11 of the Remarks that Eifrig et al fails to teach disabling AC prediction for a first MB of a second packet. However, it is noted Eifrig et al teaches the concept of disabling AC prediction for the purpose of reducing excessive data (e.g. such as occurrence of an overflow during video compression). It is also noted that Eifrig et al

Art Unit: 2621

does not specifically point out which MB the disabling function is affected. However, Youn already discloses the "basic" process of AC/DC prediction responsive to overflow conditions 80 of every MB of the data stream 68. Similarly, Eifrig et al teaches a "comparable" process of selective AC/DC prediction technique during MPEG compression. Eifrig et al's known improvement in AC prediction disablement could have been applied in the same way to the base process of Youn and the results would have been predictable and resulted in disabling the AC prediction process whenever excessive data occurs. Furthermore, both Youn and Eifrig et al use and disclose similar MPEG compression system functionality so that the combination is more easily implemented. Therefore, the claimed subject matter would have been obvious to a person having ordinary skill in the art at the time the invention was made.

### ***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
